

■ DATA PRESENTATION

The following sections provide an assessment of IBAs and potential Ramsar Sites in all countries and territories in the Asia region. For each IBA, selected details are provided for international name, location, area, Ramsar-qualifying criteria and designation progress. An analysis of the occurrence of

globally threatened wetland-dependent bird species at the selected IBAs is also provided.

Further details of each site can be found in BirdLife International (2004a) and the Data Zone at www.birdlife.org.
