**Global IUCN Red List Category** —  
**Criteria** —

*Tringa glareola* is a widespread summer visitor to northern Europe, which accounts for less than half of its global breeding range. Its European breeding population is large (>350,000 pairs), but underwent a moderate decline between 1970–1990. Although the species was stable overall during 1990–2000—with key populations in Finland and Russia stable or fluctuating—its population has clearly not yet recovered to the level that preceded its decline. Consequently, it is evaluated as Depleted.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag. %	References
Belarus	2,500 – 3,000	97–00	0	0–19	
Denmark	100 – 100	01	+	30–49	7
