Carduelis flammea is a widespread resident across much of northern Europe (occurring more patchily farther south), which accounts for less than half of its global range. Its European breeding population is very large (>8,800,000 pairs), and was broadly stable between 1970–1990. Although the trend of the stronghold population in Russia during 1990–2000 was unknown, the species was broadly stable in most other key populations in its European range, and there was no evidence to suggest that it declined significantly overall. Consequently, it is provisionally evaluated as Secure.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag. %	References
