Criteria —

Stercorarius parasiticus is a widespread breeder in coastal areas of northern Europe, which accounts for less than a quarter of its global breeding range. Its European breeding population is relatively small (<140,000 pairs), but was stable between 1970–1990. Although the species declined in Norway, Svalbard and the United Kingdom during 1990–2000, trend data were not available for key populations in Greenland, Iceland and Russia, and there is no evidence to suggest that the species declined significantly overall. Consequently, it is provisionally evaluated as Secure.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag. %	References
Denmark					
Faroe Is.	900 – 900	95	(0)	(0–19)	
Greenland	(1,000 – 10,000)	90–00	?	–	
Finland	500 – 550	98–02	0	0–19	
Iceland	5,000 – 10,000	87–94	?	–	1
Norway	9,000 – 14,000	95	–	0–19	4,27
