Global IUCN Red List Category —

Criteria —

Carpodacus erythrinus is a widespread summer visitor to most of northern Europe, occurring more patchily farther south, with Europe accounting for less than a quarter of its global breeding range. Its European breeding population is very large (>3,000,000 pairs), and was stable between 1970–1990. Although there were declines in a few countries—notably Finland—during 1990–2000, the species was stable in its Russian stronghold, and was stable or increased across much of Europe. It probably remained stable overall, and consequently is provisionally evaluated as Secure.

Country	Breeding pop. size (pairs)	Year(s)	Trend	Mag. %	References
