

THE MESSENGERS

What birds tell us about threats from climate change
and solutions for nature and people

CLIMATE GENERATION SPACE EVENT

Thursday 3 December
1315-1445
Room/Salle 8
Climate Generation Space,
Le Bourget

THE MESSENGERS: What birds tell us about threats from climate change and solutions for nature and people

Event Description

Birds are far better known than most other animals, and they are powerful messengers for the natural world. They tell us how climate change poses risks to nature and people worldwide.

This side event will illustrate the many ways by which climate change threatens birds and other wildlife. It will showcase actions that are being taken to help nature adapt, and demonstrate the vital role of nature-based solutions for reducing climate risk and building people's resilience.

The event will kick-off with the launch of a newly published report "*The Messengers: What birds tell us about threats from climate change and solutions for nature and people*" before proceeding to a high-level panel discussion on the role of nature in climate change responses. The event will be interactive, with participants encouraged to ask questions and share their own views and experiences.

Confirmed Speakers

- Carlos Martin-Novella, Deputy Secretary, Intergovernmental Panel on Climate Change
- Melanie Heath, Director of Science, Policy and Information, BirdLife International
- Edward Perry, Global Climate Change Policy Coordinator, BirdLife International
- Michael Garbo, Executive Director, Society for the Conservation of Nature, Liberia

Time and location

Thursday 3 December 1315-1445
Room/Salle 8
Climate Generation Space
Le Bourget, Paris
